2024 McLaren 750S Spider

Top-Down Velocity. Carbon Precision. The Pinnacle of Open-Air Performance.

The **2024 McLaren 750S Spider** is the ultimate evolution of the modern supercar — engineered to deliver uncompromising power and connection with the road, now with the freedom of an open cockpit. As the lightest and most powerful series-production Spider ever produced by McLaren, the 750S Spider offers exceptional responsiveness, aerodynamic refinement, and a naturally commanding presence.

Finished in an understated **Grey exterior** and a performance-driven **Black interior**, this machine is purpose-built for Dubai's roads, circuits, and luxury lifestyle.

Exterior — Stealth in Motion

Finished in **Stealth Grey**, the 750S Spider's aerodynamically sculpted bodywork is a masterclass in form and function. From its carbon fiber front splitter to the lengthened active rear wing and revised rear diffuser, every surface is shaped by airflow.

The **retractable hardtop roof** lowers in just 11 seconds — even at speeds up to 50 km/h — transitioning the Spider from precision coupe to wind-in-your-hair supercar, all without compromising performance.

Interior — Black Alcantara and Pure Focus

The **Black interior** is minimal, race-inspired, and totally immersive. With lightweight carbon racing seats, Alcantara-trimmed surfaces, and a digital driver-focused instrument cluster mounted directly to the steering column, the cabin surrounds the driver in absolute control.

Every input, every sound, every shift is precise. This isn't just luxury — it's mechanical intimacy, delivered with McLaren's signature style and weight-saving design.

Performance — V8 Power, Elevated

Under the rear deck lies McLaren's celebrated **4.0-liter twin-turbocharged V8**, pushing out a staggering **740 horsepower** and **800 Nm of torque**. With an ultra-light carbon monocoque chassis and advanced seven-speed dual-clutch transmission, the 750S Spider rockets from **0 to 100 km/h in just 2.8 seconds**, with 200 km/h arriving in under 7.3 seconds.

Its **Proactive Chassis Control**, **rear-wheel drive**, and active aerodynamics ensure balance and agility, giving the driver complete confidence — whether at the Dubai Autodrome or down the sweeping desert highways.

Engineered for Dubai's Supercar Scene

From night drives along Sheikh Zayed Road to morning runs through Jebel Hafeet, the **750S Spider** offers unmatched open-top driving dynamics. With its **Grey exterior** and focused **Black interior**, it delivers a statement of modern performance with refined, understated confidence — ideal for Dubai's high-performance lifestyle.
