Horse Power	**900+ HP**
Engine Size	**8.0 W16**
Specs	**GCC**
Warranty	**Available**

018 Bugatti Chiron for Sale in Dubai

An Iconic 1,500 PS Hypercar

Discover this extraordinary **2018 Bugatti Chiron for sale in Dubai**, presented in a sophisticated **Matte Grey exterior** with a dramatic **Red interior** . Enhanced by **Matte Carbon exterior and Matte Carbon interior** elements, this Chiron combines one of the world's most recognisable hypercar designs with exceptional craftsmanship and the immense performance of Bugatti's legendary quad-turbocharged W16 engine.

The specification creates a striking balance between understated exterior colour and vivid interior contrast. Matte Grey gives the Chiron a technical, purposeful appearance, while the Red cabin introduces a bold character that reflects the extraordinary performance available beneath the bodywork.

For collectors searching for a **Bugatti Chiron in Dubai**, this 2018 example offers a compelling combination of W16 engineering, carbon-fibre detailing and unmistakable Bugatti presence.

Matte Grey Exterior

The **Matte Grey exterior** perfectly complements the Chiron's sculpted design.

Every major surface of the Chiron was developed with aerodynamics, cooling and high-speed stability in mind. Its signature Bugatti horseshoe grille, distinctive C-shaped side profile and broad rear section make the vehicle instantly recognisable from virtually every angle.

Finished in Matte Grey, these shapes become even more prominent. The understated colour allows the engineering and proportions of the Chiron to take centre stage while giving the vehicle a sophisticated appearance.

The result is a hypercar that commands attention without relying on an excessively bright exterior finish.

Matte Carbon Exterior

Adding further character to this specification is its **Matte Carbon exterior**.

Carbon fibre is fundamental to the construction and identity of modern hypercars, combining exceptional strength with low weight. On the Chiron, exposed Matte Carbon also provides a visual connection to the advanced engineering beneath the bodywork.

The carbon finish works particularly well alongside the Matte Grey paint, creating a cohesive technical appearance rather than an overly contrasting design.

From an aesthetic perspective, this combination reinforces the Chiron's engineering-led character and distinguishes the vehicle from more conventionally specified examples.

Striking Red Interior

Open the doors and the understated exterior gives way to a dramatic **Red interior**.

The vibrant cabin provides a powerful contrast against the Matte Grey and carbon-fibre exterior, creating an unmistakably individual specification.

Bugatti designed the Chiron's interior to combine the precision expected from a hypercar with the craftsmanship of an ultra-luxury automobile. The cabin is intentionally focused, with carefully positioned controls and premium materials creating an environment that feels special without unnecessary visual clutter.

The Red upholstery gives this example an especially bold personality while retaining the sophisticated craftsmanship associated with Bugatti.

Matte Carbon Interior

The **Matte Carbon interior** extends the performance character of the exterior directly into the cockpit.

Carbon-fibre elements complement the Red cabin and provide a visual reminder of the advanced materials used throughout the Chiron.

The contrast between vivid Red upholstery and technical Matte Carbon creates an interior that feels appropriately special for a vehicle of this calibre.

Rather than presenting luxury solely through traditional materials, the Chiron combines craftsmanship with materials closely associated with motorsport and high-performance engineering.

8.0-Litre Quad-Turbocharged W16

At the heart of the Bugatti Chiron is its extraordinary **8.0-litre quad-turbocharged W16 engine**.

The powertrain produces approximately **1,500 PS and 1,600 Nm of torque**, figures that established the Chiron among the most powerful production cars of its era.

Power is transmitted through a seven-speed dual-clutch transmission and permanent all-wheel-drive system, enabling the vehicle to deploy its immense output with remarkable effectiveness.

The W16 configuration is one of the defining characteristics of the Chiron. With sixteen cylinders and four turbochargers, the engine represents an extraordinary engineering solution developed to combine immense performance with the refinement expected from a Bugatti.

Extraordinary Hypercar Performance

The Chiron's performance remains remarkable even by modern hypercar standards.

With approximately 1,500 PS available, the Chiron can accelerate from **0–100 km/h in under 2.5 seconds**. Acceleration continues with extraordinary intensity beyond conventional supercar speeds, demonstrating why the Chiron became such an important benchmark in the hypercar category.

However, Bugatti designed the Chiron to offer more than headline acceleration.

Its sophisticated aerodynamics, all-wheel-drive system, chassis technology and immense braking capability were engineered to work together, creating a vehicle capable of managing extraordinary performance while maintaining stability and refinement.

That ability to combine extreme speed with luxury is fundamental to the Chiron's identity.

Engineering Beyond a Conventional Supercar

The **Bugatti Chiron** was conceived on an entirely different scale from a conventional sports car.

Its engineering had to accommodate enormous power, substantial cooling requirements and exceptional high-speed forces while maintaining the comfort and quality expected from the Bugatti marque.

Aerodynamic elements actively manage airflow around the vehicle, while extensive cooling systems support the W16 engine and its four turbochargers.

This integration of powertrain, aerodynamics and advanced materials makes the Chiron as much an engineering achievement as it is a luxury automobile.

A Modern Collector Hypercar

For collectors, the Chiron represents an important chapter in Bugatti's modern history.

It followed the groundbreaking Veyron and pushed the concept of the ultra-high-performance luxury automobile significantly further. Greater power, sophisticated aerodynamics and a completely evolved design established the Chiron as one of the defining hypercars of its generation.

The **8.0-litre quad-turbocharged W16** is central to that significance. With the automotive industry increasingly moving towards electrification and smaller-capacity powertrains, the Chiron represents an extraordinary period of combustion-engine engineering.

This particular example adds a distinctive visual specification through its **Matte Grey exterior, Red interior, Matte Carbon exterior and Matte Carbon interior**.

Bugatti Chiron for Sale in Dubai

This **2018 Bugatti Chiron for sale in Dubai** combines a sophisticated Matte Grey exterior with a dramatic Red interior and extensive Matte Carbon detailing inside and out.

Its legendary **8.0-litre quad-turbocharged W16 engine**, producing approximately **1,500 PS and 1,600 Nm**, provides the extraordinary performance that established the Chiron as one of the world's most recognisable hypercars.

The combination of immense engineering capability, distinctive specification and Bugatti craftsmanship makes this example particularly compelling for enthusiasts and collectors searching for a **used Bugatti Chiron in Dubai**.

Available through Exotic Cars Dubai, this Chiron joins a carefully selected inventory of rare hypercars, supercars and collector vehicles. Visit **Exotic Cars Dubai** to explore our wider selection of Bugatti and other exceptional performance automobiles.

To experience this **2018 Bugatti Chiron** in person, visit Exotic Cars Dubai on Sheikh Zayed Road or contact the showroom for current availability, verified mileage, warranty information, complete vehicle specification and private viewing arrangements.
